Space Station

Humans have always looked up at the night sky and wondered what lies beyond the atmosphere of our planet. The dream of space exploration has been a constant theme in human history, from ancient myths to modern space exploration. Today, space exploration is no longer just a dream, but a reality. It has become a global effort, with many countries and organizations working together to explore the vastness of space.

Indian Endeavour
in Space

The Indian Space Program has achieved many milestones in the field of space exploration. It has successfully launched several satellites and has sent the first Indian astronaut to space. The program is currently focused on developing advanced rockets and spacecraft to enable deep space exploration. The Indian Space Program is a testament to the country's technological capabilities and its commitment to space exploration.

The Indian Space Program has achieved many milestones in the field of space exploration. It has successfully launched several satellites and has sent the first Indian astronaut to space. The program is currently focused on developing advanced rockets and spacecraft to enable deep space exploration. The Indian Space Program is a testament to the country's technological capabilities and its commitment to space exploration.

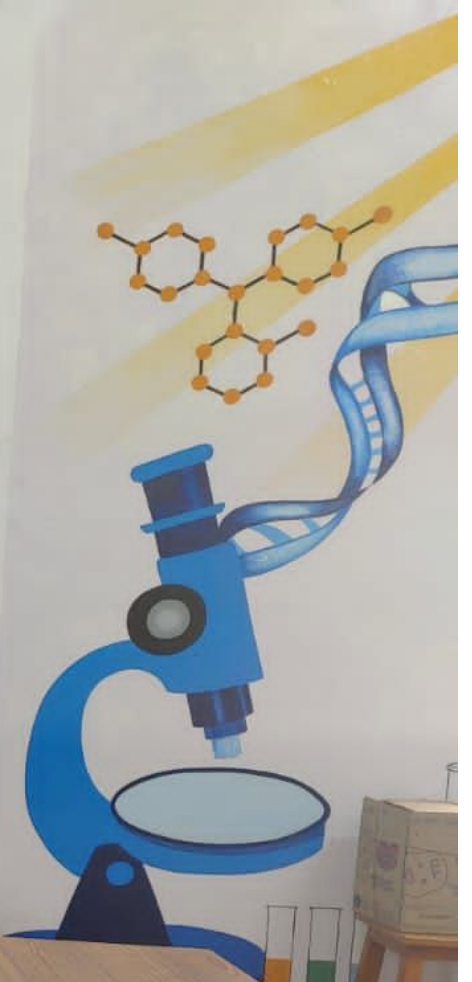

Future Rockets

The text on the 'Future Rockets' panel discusses the evolution of rocket technology, including the development of solid rocket boosters and the use of reusable launch vehicles. It highlights the challenges of space exploration and the need for advanced propulsion systems. The panel includes several small images of rockets and launch vehicles, along with a diagram of a rocket's internal structure.

MARINE MINE PIPING

AN ANCIENT MYSTERY. TEMPLE OF MALTA

Background
One of the world's oldest free-standing structures is located at Ggantja, Malta. It is composed of massive blocks of limestone, some of which weigh up to 100 tons. The structure is a testament to the advanced architectural skills of the prehistoric civilization of the Maltese Islands.

Solar alignment of the Ggantja temple

The structure
Each of the three megalithic temples at Ggantja is a masterpiece of prehistoric architecture. The structures are built from massive blocks of limestone, some of which weigh up to 100 tons. The structures are a testament to the advanced architectural skills of the prehistoric civilization of the Maltese Islands.

The discovery
The discovery of the Ggantja temples was a major archaeological find. The structures were discovered in the early 20th century and have since been excavated and restored. The structures are a testament to the advanced architectural skills of the prehistoric civilization of the Maltese Islands.
